## Data Port Information and installation

Wiring example of 4-port home network

## Cat 5e connections information

- For use with quality RJ45 CAT5e leads
- Ideal for data networking
- Connect my lap top to my broadband router which is out of range of the wireless connection
- RJ45 8 pin – Ethernet connection (standard networking connection)
- This type of cable is used in structured cabling for computer networks such as Ethernet.
- Though newer cable technologies like CAT6 and CAT7 are in development, CAT5 / CAT5e Ethernet cable remains the popular choice for most wired local area networks (LANs), because Ethernet gear is both affordable and supports high speeds.

Example: back of a BT router, see the four Ethernet ports
